
and rotating at high speed, a flow of air generated by the rotation of the magnetic disk medium can propagate to the read/write head over the magnetic disk medium, and can induce a displacement of the read/write head in a tangential direction with respect to the magnetic disk medium. Such a displacement is likely to cause a skewed writing of data into the magnetic disk medium, which results in an increased bit error rate in reading the data written into the magnetic disk medium. In view of this problem, prior art is known wherein a vent hole is formed on the side surface of a magnetic disk drive, and a constant air flow is supplied to the inner end of the vent hole to create an air current within the magnetic disk drive. The air current allows the formation of a smooth air film on a magnetic disk medium, to thereby suppress the generation of a skewed writing caused by air flow as described above. 648931e174
