About This Game

A Video Game About a Woman Talking to the Police

Her Story is the award winning video game from Sam Barlow, creator of *Silent Hill: Shattered Memories* and *Aisle*. A crime fiction game with non-linear storytelling, *Her Story* revolves around a police database full of live action video footage. It stars Viva Seifert, actress and one half of the band *Joe Gideon and the Shark*.

How does it work?

Her Story sits you in front of a mothballed desktop computer that's logged into a police database of video footage. The footage covers seven interviews from 1994 in which a British woman is interviewed about her missing husband. Explore the database by typing search terms, watch the clips where she speaks those words and piece together her story.

Unlike anything you've played before, **Her Story** is an involving and moving experience. A game that asks you to listen.

Title: Her Story
Genre: Adventure, Indie, Simulation
Developer:

full review here

https://youtu.be/vzeaodHap_BQ. it doesn't work. I think it gives you permanant brain damage and only has one class with different reskins and one enemy with two reskins but at least it has a cool vaporwave aesthetic and a killer soundtrack. This is a fantastic game. The battle system is unique which is a major plus. You cant just keep hitting enter and win the battle you have to strategize to keep the threat on your tank characters otherwise your weaker defense characters will die too fast. I enjoyed how i got to choose the skills i wanted to learn and not preset ones that you get by leveling up. The only problem i really had with this game was when i was running the game was laggy and at a certain point in the game the battles became delayed/laggy.. Cheap. fun with 1043 achievements and trading cards, this game is totally worth it.. The fourth installment of Hiveswap Friendsim. I felt that the third Wright brother's character just wasn't very interesting, but with 3 choices and decent writing, he was still somewhat enjoyable nonetheless. Tagora, however, is the character that takes the cake. My personal favorite in the series. Tagora is an ambulance chasing lawyer, and I found his whole section the most genuinely entertaining thus far, even though his part featured only 2 choices.. Very few games live up to their title, in my brief time playing this game I did infact shoot zombies.. Beew bewbewbewbew. ABSOLUTE garbage. Not even worth the 90% off. AI awful, pathetic graphics, tracks made by remtards. This extremely low quality POS has it all.

No, i'm sorry but Revolt is still much funnier and can make even new players learn it.

RC Mini Racers is not Revolt, cars are a bit bigger, controlling using keyboard is not that impressive and the AI is a challenge even from Easy races, so new players might not be impressed to pay 4,99 euros.

Revolt is abandonware so you might want to try it before buying this, maybe just maybe i'm to old fashioned... and this RC Mini Racers game could be great.. Great game. Really challenging but fun. Interesting level design. And the price is low, so buy it! I recommend it.. Memery~

☺☺~. A good buy if you intend to play anywhere east of Constantinople, as anywhere west of that does not have access to the features brought with this dlc, unless you expand that way. Anyways, the features a kind of nice, I reccomend it on sale. The free update that came with this brought Tibet into the game, which is a nice addition with a special government type and new religion. Also, if you have Monks and Mystics, the Chinese have some overpowerd artificats that provide huge bonuses.. I'm having a blast with this game. I'm a couple of hours in at this point and there is a lot of depth to the game.

I've spent a lot of time fumbling with my ship to get the loadout exactly how I wanted it to be, and from what I can see there is a boatload off things to do and to see in the game.

There are some glitches, but the dev is really active on the forums. Would recommend 9/10. 3DMark's benchmarking algorithms are off and most people know how to game them to get waaaay higher scores than is even possible. People running dual core Intel Celeron processors beat out AMD FX 6+ core processors. Likewise people with integrated graphics beat out discrete GTX cards by miles.

If the scores were meaningful, benchmarking software like this would be useful. But it's not and therefore, I can't recommend it.. This is 100% a grinding RPG. And has some elements of a dating sim. I liked it but i like grinding so if your into that i think you will have fun with this game. My only issues are that theres not to much direction so you have to figure it out on your own which can also be fun in a way. And the last issue is that after the update that just happend my 7+ hours of game play just got erased so i prb will not ever play this game again. I hope the creator of the game fixes this issue for the future but until then im done with it.

overall i give it a 5/10 more if the update didnt wreck my game.. I want my cd key for sigta and ferry game. It is cool and exited game i played

v1.14 (8th Januar):

Changelog:

- CUR AI improved (it no longer destroys its impulse receivers with massive overloading and builds them in a better way).
- Building area for Ixir powerplant now looks better.
- Fixed a bug, which would cause a freeze when you play 2 singleplayer games in a row, with the second game having less AI players than the first.
- CUR Virus special ability is now only allowed on military units and structures.

I know this is a small patch, but there will soon be another patch for some more map reworks and improving the Ixir AI.. **v1.03 (4th September 2016):**

Changelog:

- Map Rework - Part 1: The maps "maldeafield, rockyriver, tamancluster and xirellmountains (new)" should now look much better than in the last patch.
- Bugfix: The units on the minimap should now have the correct color again.
- CUR's Cybotics now have more detailed stats on pressing "Enter".

-
- CUR's Cybotics now produce more energy when overclocked.
 - Steam Cloud support enabled. (please let me know if you experience any problems)

Planned for next version:

- Adjustable FOW quality (deferred)
- More Map Reworks
- Text Tutorial
- Subtitles (this will probably take a while)

. v1.01 (25th July 2016):

Changelog:

- Added Victory/Defeat message at end of game
- Added hint how to hide Victory screen
- Bugfix of campaign level 16

Planned for next version:

- Adjustable minimap size
- Add a button to start the server from in game

. v1.15 (25th July):

Changelog

- Small Improvement to Ixir AI.
- "New units" can now be send through the portal in multiplayer ("new units" refers to the ones of patch 1.1).

. Survey Results & Preview of Next Patch:

Dear Community,

it's been about a month since I started the survey. I got 30 results at this point and would like to share the results with you (If you still want to fill out the survey, feel free to do so. I will continue to read the feedback I get.)

Survey Results: v1.1 (1st November 2016):

Changelog:

- New units - 6 in total (1 per faction). I'll let you figure out the details about them yourself. ;)
- Text Tutorials - There is now an extra Tutorial button on the main screen, leading to a new menu, where you can watch

the video tutorials or have a look at text based guides for each faction.

- More Maps reworked - namely "alidacoast" "cintacoast" "glunaryplain" "incuracliffs" "olonriver".
- Small rebalances about the Ixir:
 - Titan HP reduced by ~15%.
 - Iquaros HP increased by ~10%.
 - Portal, spawn time for all unit types reduced by ~35%.
- Some menu backgrounds are a bit darker, so you can read the text better.

Planned for next version:

- Adjustable FOW quality (deferred)
- More map reworks.
- Subtitles

Please let me know what you think about the new units! :)
And Have Fun with the new patch!

5th November Hotfix:

- Fixed a bug, which made shots fly through smaller units, which happened very often for the snipers.

7th November Hotfix:

- Reuploaded server.exe, because it was missing on the last patch.. **v1.11 (20th Novemeber) Hotfix:**
This is just a small patch to fix some bugs.

Changelog:

- Fixed broken sound file for German version (Level 19)
- Fixed broken level file (Level 22)
- Easy Resolution Change: There is now a checkbox in the launcher, where you can overwrite your game resolution. This will overwrite the saved resolution with the maximum for your screen. This is useful when sharing a profile over multiple computers with different screen resolutions.
- Gameplay, Cybotic costs cap now at 30 (not 25).
- Bugfix of the Virus (CUR Special Ability). It now also lasts until the end of game.
- Pressing some keys on the menu screen no longer cause an error message.

. Multiplayer Fix:

Hello everyone,

There was an fatal error, when connecting to any server, caused by an error during the network initialization. This bug should now be fixed.

(Note: The game still does only support local LAN multiplayer. Playing over the internet requires third party programs, which emulate a local network like hamachi or tunngle. Unfortunatly not all games (including this one) work with those programs right away, please try the trouble shooting guides of those programs when encountering "Invalid IP" error from Intruder Alert first.)

Greets knittely

P.S. For those who used the temporary workaround, the "multiplayer" BETA branch does now not exist anymore

UPDATE 18.02.2018: there was still a small mistake with the multiplayer code, although it shouldn't have caused any bugs. I fixed it anyways, since some people still got some errors.
